

Regent Enterprise, Diamond Edition™

On Demand Financial Aid Management System

- Maximum functionality.**
- Total flexibility.**
- Unparalleled ease of use.**

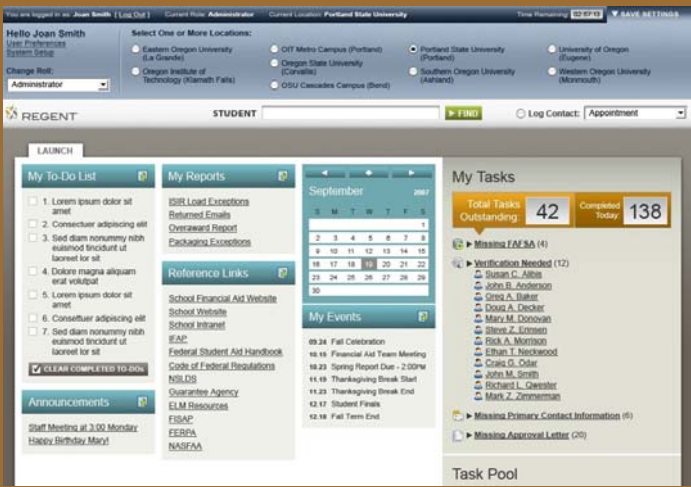

Regent Enterprise, Diamond Edition (Diamond) is changing the way institutions process financial aid, giving your institution innovative, intuitive tools to automate and manage every aspect of the financial aid life cycle. Standardize and centralize your management of financial aid, achieve increased productivity, ensure compliance, and control costs - all in one turnkey system, Regent Enterprise, Diamond Edition.

Diamond is built on the following principles:

- Automation by default, user intervention by exception to increase administrative efficiencies
- Wizardry to increase ease of use
- Configurability over customization for a high level of flexibility

Diamond features include:

- Enterprise Hierarchy – Diamond supports multi-institutional/multi-campus processing. The power of Diamond is the ability to manage a multi-tiered entity with one instance of the product.
- Standard Term, Non-Standard Term and Non-Term Processing – Schools which support, or would like to support, a non-traditional enrollment calendar, can now meet the unique needs of their student population by offering non-standard term or non-term classes.

Diamond offers a 4-tiered architecture enabling multi-campus financial aid management from the enterprise level all the way down to the site level (e.g. Enterprise, Institution, Location, and Sites). This capability allows financial aid administrators to seamlessly manage and toggle between multiple campuses. This centralized management enables better cost control, higher levels of student service, and a tighter oversight on compliance.

Diamond enables seamless management of financial aid for these non-traditional students.

- Automated Workflows (Business Processes) - Automated workflow processing can take a student through the entire financial aid process without the intervention of a single administrator. Time consuming verification reports are no longer needed.
- Rules-Based Architecture – Diamond provides a rules wizard that prompts users through a series of questions to generate the code, so you don't have to. This capability enables institutions to easily write complex rules.

Diamond's Student Tab provides all information on a student's financial aid status and history – in less than two clicks. The student tab tracks every interaction, communiqué, action taken, document, and award, scholarship or grant associated with that student. The progress bar gives you a visual snapshot of where the student is in the financial aid lifecycle.

Managing financial aid as a top-line strategic imperative is fundamental to your institution's success, and has never been so easy. Financial aid drives revenue through recruiting, admissions, Title IV, and student service.

Regent Enterprise, Diamond Edition is the single most important decision you can make to improve your bottom line.

"Regent Diamond was the only solution on the market that could meet our institutions' unique multi-campus requirements and fully integrate with our PeopleSoft investment. We felt very confident going with Regent given the company's long history in the financial aid market. It's like having a direct liaison with the Department of Education."
